Abstract: In this universe of developing advancements everybody is utilizing Android. With huge number of work opening the human labor force has increased. Thus there is a need of a framework which can deal with the information of such countless Employees in an association. This undertaking disentangles the assignment of keep up record in view of its easy to use nature. The Aim of "Employee Task Management System" is planning a booking framework for a work community. Workers are the foundation of any organization. The executives of worker execution assume's a significant part in choosing the accomplishment of the association. Worker the board application is an incredible asset to calm the client from the convoluted errand of dealing with representative planning physically. Representative administration application utilizing android PDA's is attempting to fabricate an android application for log the information on the worker naturally. The application is really a set-up of uses created utilizing Android and PHP. It is easy to comprehend and can be utilized by any individual who isn't even acquainted with straightforward representative's framework. It is quick and can perform numerous activities of an organization or association. The product is very easy to understand. The task contains modules like Employee and Admin. This form of the product has multi-client approach. For additional upgrade or advancement of the bundle, client's.

Keywords: employee management system, employees, human resources, leave management, task management, Android, PHP.

INTRODUCTION

Project description

Particularly in far off regions the representative employee management system execution can be testing task. In spite of the fact that it can't deny the advantages. Utilizing the representative employee management system give a simple method to oversee employee work and better execution as a group. Due to streamlines and sorts out group the board for HR experts, entrepreneurs and different directors it can consider as a helpful device to a worker the executive's framework. From finance and on boarding to time off following and execution is the scope of this system, however it generally should cover the fundamental HR highlight. The worker the executive's system is plan for setting aside cash, time and force and function admirably for the group moreover. Especially in for telecommuters for dealing with the group it utilizes the customary announcing through email. In spite of the fact that this strategy is chaotic and lumbering. It is a tedious administrator errand to enhance the presentation of the group, so it can zero in on accomplishing the objective.

PROBLEM STATEMENT

This report's documentation goes through the whole process of both application program and database development. It also comprises the development tools have been utilized for these purposes.

Figure 1: Employee Management system functions

Problem Discussion

This system should comprise of an application program, on one hand, and an information base (archive of information) on the other. The program ought to play out the essential tasks upon the information base as recovering, embedding, refreshing and erasing information. Any extra usefulness is an objective of a further module improvement. It is a sort of procedure to begin the improvement from planning and building the information base, as this structure will decide the further structure of the application program. The sensible information base model (tables, their substance and the connections between them) ought to react to the given errand and spread the essential prerequisites. The Interface of the program ought to be easy to use, and the program ought to be as simple for use as it is conceivable.

Objective

Paperless: To make existing framework paperless and spare heaps of bundling logs of documents on the rack which makes the later on access of the record not in any manner simple assignment and overhead to people groups. Making the current system completely programmed which will spare loads of HR work. As the current framework is all human asset work is expected to keep up and keep the record and subtleties of each worker under and association to monitor each representative in staff working in an association.

EXISTING SYSTEM

The problem definition for planning the system is to keep up information of representative, to make simple controlling employees, to separate positions and access control of employees, to utilize innovation for precise and ideal handling by completely security and full power access. The target of the undertaking is to set up employee's data framework about status of representative and participation of employees and overseeing errand and refreshing report of employee.

PROPOSED SYSTEM

This section expands on the work done in the Analysis Chapter and gives documentation for the Design of the Employee Management System. The EMS is demonstrated as far as articles and classes and their collaborations with one another. Clarification of the proposed framework is done also structure of the Entity Relationship Diagram (ERD). Plan of the User Interface is additionally examined. The proposed framework is intended to kill all the downsides of the current representative administration programming. The framework will be liable for keeping up data about representatives, hence their own profile. The framework will fuse leave the executives right from application to acknowledgment/dismissal of leave demands just as all representative ventures with close checking of the undertakings from creation to fulfillment and preparing's to help with observing dynamic and inert workers.

The main features to be added include:
- Employee profiles
- Employee Attendance
- Leave management
- Task management
- Reporting history
- Notifications

Fig. System Architecture

The proposed system is intended to kill all the disadvantages of the current worker the executives programming. The system will be answerable for keeping up data about workers, along these linestheir own profile. The system will fuse leave the board right from application to acceptance/rejection of leave demands just as all worker ventures with close observing of the undertakings from creation to consummation and training's to help with checking dynamic and dormant employee.

REQUIREMENTS HARDWARE REQUIREMENT
Processor: Intel CORE i3
RAM:4 GB
Hard Disk: 64 GB

SOFTWARE REQUIREMENT
Operating System: Microsoft Windows XP with Service Pack2/Windows 7. Software Package: SDK and Android Studio, XML, Mysql, PHP

APPLICATION

1.   Organization
2.   Schools, Colleges

ADVANTAGES

•   Fast and accurate

•   Starting with going paperless, which saves money and the environment in the process.

•   Going paperless also allows employees to access records in seconds, and ensures privacy by protecting documents with data encryption.

•   Another huge benefit of employee management systems is that it eliminates

tasks that waste time, like manual data entry and searching for documents.

•   Leave and attendance paired up can improve accuracy and build discipline in any organization.

•   More disciplinary approach from employees as they are being monitored by the Employee Management System software.

CONCLUSION

This application enables the supervisors to refresh the general presentation of the workers in their particular territories. This observing framework is a progressive portable application which utilizes Android OS for checking time participation of employees. There is no need of manual entering of the day by day movement subtleties of every worker onto the information base. It totally cancels the customary method of figuring exhibitions. This will impressively decrease the administrative work and spare one's valuable time. This application utilizes the ongoing versatile improvement advances and consequently expands the general exhibition of the workers, additionally has a considerable business esteem since it diminishes equipment and support cost and builds customer's satisfaction.
